Endodontics

Requests for services must meet the following basic criteria:

Endodontic therapy on primary teeth D3230, D3240
- Tooth must demonstrate advanced caries or trauma.
- Root fracture must be absent.
- Clinical crown must be sufficient to retain a restoration, prefabricated resin or stainless steel crown.
- Tooth must not be near exfoliation – root resorption may not exceed 50 percent.

Endodontic therapy on permanent teeth D3310 – D3330, D3346 – D3348
- All canals must be instrumented, cleaned and sealed within 2mm of the radiographic apex.
- Tooth must present with endodontic pathology, symptoms.
- Tooth must be restorable.
- Tooth must present with at least 50 percent bone support.
- Patient must be free of periodontal disease.

Bone graft in conjunction with periradicular surgery D3428, D3429
- Surgical defect must be large enough to require graft for adequate healing without significant residual defect.

Biologic materials to aid in soft and osseous tissue regeneration in conjunction with periradicular surgery D3431
- Biologic materials must result in significant improvement in tissue regeneration and healing.
- May be considered incidental by CareFirst when used in conjunction with bone grafting and/or guided tissue regeneration (GTR).

Guided tissue regeneration, resorbable barrier, per site, in conjunction with periradicular surgery D3432
- Use of the resorbable barrier for GTR must result in significant improvement in tissue regeneration and healing.

Canal preparation and fitting of performed dowel or post D3950
- This service may not be reported in conjunction with D2952 – D2954 or D2957 by the same practitioner.
- This service may be reported by an endodontist when performed as ancillary to endodontic therapy but not by the dentist who is preparing the canal for the post and also placing the post and fabricating the core.
